

Call for Application to Host the WRRmod2026 Seminar

The International Water Association (IWA) Water Resource Recovery Modelling (WRRmod) seminar is a prestigious event, that brings together international specialists in water resource recovery modelling to share their work on recent advances in modelling of treatment processes and resource recovery systems. It is a distinctive conference that could enhance the profile of hosting organisations or institutions within the resource recovery community.

On behalf of the IWA modelling and integrated assessment (MIA) group, we welcome applications from all who wish to host the 10th Water Resource Recovery Modelling Seminar (WRRmod2026).

The application process involves sending an expression of interest, in the form of a short (about 5 min) presentation that provides:

- Basic information about the institutions of the host(s),
- Where you intend to host the WRRmod2026 Seminar. At least providing information about the country and specific city/town (the more detail, the better).
- The proposed conference themes.
- Anything that would showcase your location as ideal for an exciting and vibrant WRRmod2026.

Information on organisation of IWA events can be found at <https://iwa-network.org/organise-an-event/>.

The Organising Committee for WRRmod2024 will make the applications available online and an online vote will determine the WRRmod2026 finalist.

If you are interested in organizing the WRRmod2026 conference, please send your presentations before August 18, 2023 to WRRmod2024@nd.edu.

We look forward to receiving your application.

Best regards,
Leon Downing, Tom Johnson, Adrienne Menniti and Rob Nerenberg
Steering Committee of the WRRmod2024 Seminar
